PLACE CONNECT QUICKSTART GUIDE

This 5-Step “QuickStart” Guide is designed to attach a geo pin (latitude/longitude) to a URL website with minimal configuration. Please refer to PlaceConnect User Manual to maximize configuration options.

Step 1 - Login

- **Please login.** You should have a private PlaceConnect Server URL, a username, and a password.

Step 2 - Create an “App Behavior Setting”

- Add an “app behavior setting” to decide how you want your app to behave for a place. Go to **Gear >> App Behavior Settings >> + Add App Behavior Setting** button.
- Enter a location **Name**, and a **Time Zone** of your choosing. Leave other fields blank. You will not need these for QuickStart.

Name

Timezone

- When finished, click the **Save** button: 

Step 3 - Create a “Content View”

- Add a content view where you will create the content for a place. Go to **Content >> + Add Content View** button.
- Enter a **Title**, and select “External URL” in the **Content View Type** field. Once selected, an **External URL** field will appear. Enter URL: “<https://www.apple.com>” If desired, upload a **Thumbnail** image no greater size than 160x160 pixels.
- When finished, click the **Save** button: 

Content View Type

External URL

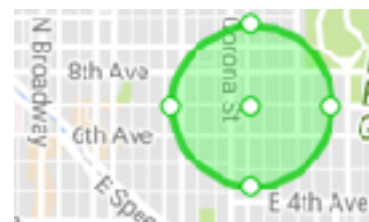

Region Type

Step 4 - Configure a “Region”

- You will add a “region” that tells the mobile device an area you want to monitor. Go to **Regions >> + Add Monitored Regions** button.
- Enter a **Name**, and select “Geographic” in the **Region Type** field. Next, navigate within the map and click to drop a Region. Add a radius, if desired.

Name

- When finished, click the **Save** button: 

Step 5 - Configure a “Geo Pin” & attach the Content View!

- Go to **Places >> Geo Pins >> + Add Geo Pin** button.
- Enter a **Name**, select the **Behavior Setting**, and **Content View**. Next, navigate within the map and click to drop your Geo Pin.
- When finished, click the **Save** button: 
- Finally, go launch **PlaceApp** on your mobile and enjoy!!
